

- 1 Enterprise data is collected from all sources and imported into DataMass™, Stabili's integration engine.
- 2 The data is cleansed, transformed, normalized, and aggregated in preparation to be exported to Stabili's exclusive, custom Dynamics 365 solution.
- 3 The data is exported to Dynamics 365 and routed to the corresponding entities, based on Stabili's exclusive entity rules engine.
- 4 Utilizing a variety of available Dynamics 365 solutions as a foundation, the Stabili engine processes all the relevant information into actionable data for critical business processes.
- 5 This aggregate data is then surfaced across the compliment of companion StabiliWare™ solutions.
- 6 Each StabiliWare™ solution integrates applications from the Office 365 suite for a variety of purposes, including communication, collaboration, analytics, and document management.
